

Idea to implement

Breakfast recipe generator

Goal → To keep in account the ingredients available, required and suggest high protein breakfast recipes

User → Me / people like looking their own breakfast and confused every morning what to cook.

Pain point → lack of thought for breakfast ideas
want to keep in mind their macros.

End up cooking the same thing consistently or then get bored.

Vision → User to enter the weekly grocery stock up list
(one time in a week)

[No. of people for which

always

breakfast will be cooked
dictary requirements / restrictions
Veg / Non Veg / No eggs

on the basis of above,
generate a recipe.

MVP2 [option to regenerate]

button - I cooked it
or
did not cook it

if clicked on cook it
→ subtract the groceries

And the recipe generator will
also have an option to suggest
ing. currently not entered by
the user or if anything they
are running low

[prioritization] → grocery counter
dictary expd.
recipe generator
what we are running
low on.
